

THE ULTIMATE PRO PRODUCT LINE

HOTROD® FOG (FATS, OILS & GREASE)

- Specifically designed for grease traps in commercial or industrial settings
- Suspends below grease layer to digest fats, oils & grease where buildup occurs
- Stays effective even in high-flow systems, preventing clogs & odors
- Great for ongoing grease management & making pump-outs easier & more efficient

HOTROD® FLO ENZYMATIC DRAIN MAINTENANCE

- Perfect for slow drains, odors in traps & plumbing maintenance programs
- 16 oz bottle: provides 8 applications for residential use
- 1-gallon bottle: ideal for commercial use with automatic dosing system
- Prevents clogs & keeps drains clean without manual effort

GREASE & DRAIN SOLUTIONS FOR PROFESSIONALS: PATENTED, PROVEN & POWERFUL

Better Biology, Cleaner Systems: The Smarter Way to Manage FOG and Drains

HOTROD® products are engineered to enhance system performance, reduce maintenance costs and restore the natural bacterial cycle in grease traps and drain systems.

HOTROD® FOG provides an advanced, three-part formula to jumpstart grease trap biology. Combining proprietary bacteria with a patented activation process, it supercharges microbial populations to digest fats, oils and grease (FOG) more aggressively. The result? Lower solids, cleaner effluent and reduced backups in your system.

HOTROD® FLO offers a powerful, easy-to-use drain treatment that prevents clogs, eliminates odors, and extends the life of your plumbing system. Whether in commercial kitchens or high-use drains, HOTROD® FLO keeps things flowing smoothly.

With HOTROD's® patented formulas, you can maintain grease traps and drains effectively, reduce downtime and avoid expensive repairs.

KEY BENEFITS

Patented Technology: Reduces the need for frequent dosing while maximizing biological efficiency

No Emulsifiers: Safeguards your drain lines by digesting solids without harmful chemicals

Comprehensive Solutions: Tailored options for grease traps, lift stations and drain lines

Cost-Effective Maintenance: A simple application schedule minimizes costly repairs and service calls

Professional Results: Trusted by industry experts to maintain system health and performance

HOW A COMMERCIAL GREASE TRAP/INTERCEPTOR WORKS

The Environmental Protection Agency has labeled FOG (Fats, Oils, Grease) as a pollutant and reports that 47% of all waste water blockages across the country were caused by FOG. This can affect the water supply system of a city and even ruin natural water resources. Every municipal has established laws to prevent grease from entering into the sewer systems by installing a grease trap (aka grease interceptor). As long as your establishment has a kitchen or cafeteria where food is prepared, FOG is a daily byproduct.

Grease traps are typically found under the kitchen sink, installed between the main sewer line and the sink pipe. Wastewater from the kitchen drains, dishwashers and sinks enter the grease trap. The baffling structure cools the hot, greasy wastewater and the FOGs start to separate and remain in the grease trap, while the filtered FOG-free wastewater continues down the pipes into the main sewer system or a septic tank.

2-Months Post-Treatment with **HOTROD® FOG**

- ✓ Suspends below the grease layer in grease traps, targeting fats, oils & grease (FOG) for efficient breakdown
- ✓ Reduces solids, sludge & odors for cleaner wastewater discharge
- ✓ Patented biological action, optimized for high-flow systems
- ✓ Exclusive to septic & plumbing professionals, ensuring expert application

Use **HOTROD® FOG** for ongoing maintenance

Use **HOTROD® 9-1-1** for emergency or severe situations

DOSAGE GUIDE

MUNICIPAL WET WELLS/LIFT STATIONS

| Gallons Per Day | 2-WEEK INITIAL DOSE Bottles Per Week | MAINTENANCE DOSE Bottles Per Week |
|-----------------|--------------------------------------|-----------------------------------|
| 100,000 | 1 | 1 |
| 400,000 | 2 | 1 |
| 800,000 | 3 | 1 |
| 1,200,000 | 4 | 2 |
| 1,200,000+ | Custom | Custom |

COMMERCIAL KITCHEN GREASE TRAPS

| Holding Capacity in Gallons | |
|-----------------------------|-------------------------|
| 50-100 | 1 Bottle Every 2 Months |
| 100-500 | 1 Bottle Every Month |
| 500-1,000 | 2 Bottles Every Month |

"Our results have been optimal. The addition of the floating agent has taken this product to another level and will open a lot of doors for this product in municipal work. It works better than anything we have ever tried."

– Illinois Wastewater Operator

HOW A DRAIN SYSTEM STAYS CLEAR

Drains are an essential part of every building, responsible for carrying wastewater away from sinks, showers and appliances to the main sewer or septic system. Over time, organic matter such as food particles, soap scum, grease and hair build up inside pipes, causing slow drains, unpleasant odors and eventually blockages. These issues can disrupt business operations or daily life, leading to costly emergency repairs.

Regular drain maintenance is essential for preventing these problems. While chemical cleaners are often used to address clogs, they can corrode pipes, harm septic systems and damage the environment. Many harsh drain cleaners provide only temporary relief by breaking down clogs superficially, without addressing the underlying buildup.

That's where **HOTROD® FLO** comes in! Our professional-grade drain cleaning solution is specifically formulated to target slow drains and odor-causing buildup in traps. Unlike harsh chemical alternatives, **HOTROD® FLO** uses a powerful bio-formula that digests organic matter without harming your pipes or septic system. In fact, it actively benefits them by reducing buildup and supporting the health of your septic system downstream, helping to extend its lifespan and efficiency.

Two Convenient Sizes:

HOTROD® FLO is available in an easy-to-use 16 oz bottle for homes or small businesses & a commercial-grade gallon size for high-flow systems

Automatic Application:

The gallon size can be paired with a pump for effortless dosing twice a day, ensuring your drains stay clean without manual intervention

Long-Term Prevention:

Keeps drains flowing smoothly & eliminates odors at the source by restoring biological balance

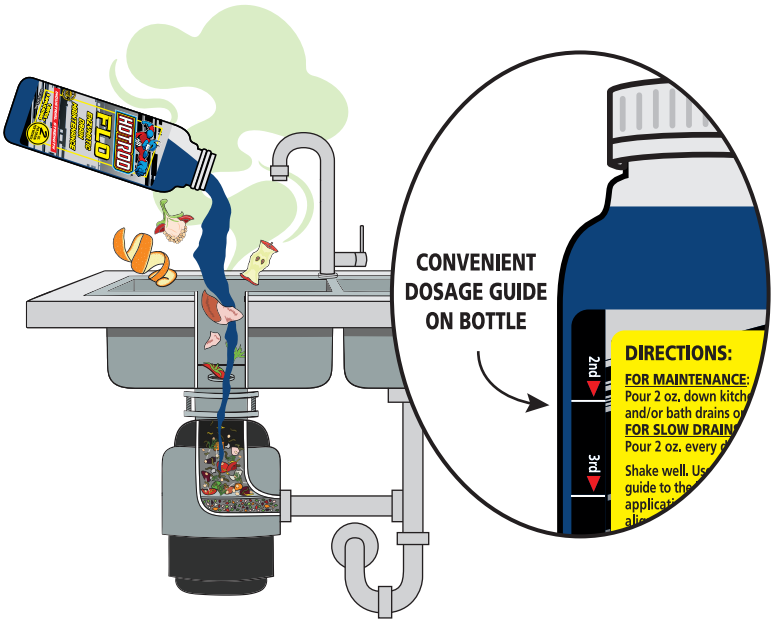

Perfect for Plumbing Maintenance Programs:

Integrates seamlessly into routine maintenance schedules, providing proactive care for drains & pipes

Keep your drain system flowing freely and odor-free with **HOTROD® FLO**—a reliable solution designed to make drain maintenance simple, effective and environmentally responsible.

"Totally recommend using this product. The drains from our kitchen to our grease trap were giving us problems for years. We had the line jetted and have been applying **HOTROD® FLO** for over a year now with no issues. It works!"

– Illinois Hospital

✓ Clears slow drains & degrades sludge in plumbing systems

✓ Eliminates odors while boosting septic & plumbing efficiency

✓ Safe, non-toxic, non-caustic, non-pathogenic, trusted for long-term use

✓ Exclusive to septic & plumbing professionals, ensuring expert application
